

64KB Data RAM is connected to device slot five.
 Reads and writes to the M register are directed to Data RAM when device 5 is selected via the D register.
 The MSB of the address selects between two 32KB SRAM ICs.

Instructions can be fetched from either Instruction ROM or Instruction RAM.
The lower 32KB of the address space is mapped to ROM, the remainder to RAM.

Sheet: /Instruction Fetch/
File: Instruction Fetch.sch

KiCad E.D.A. - kicad (5.1.0-0)		Id: 8/22

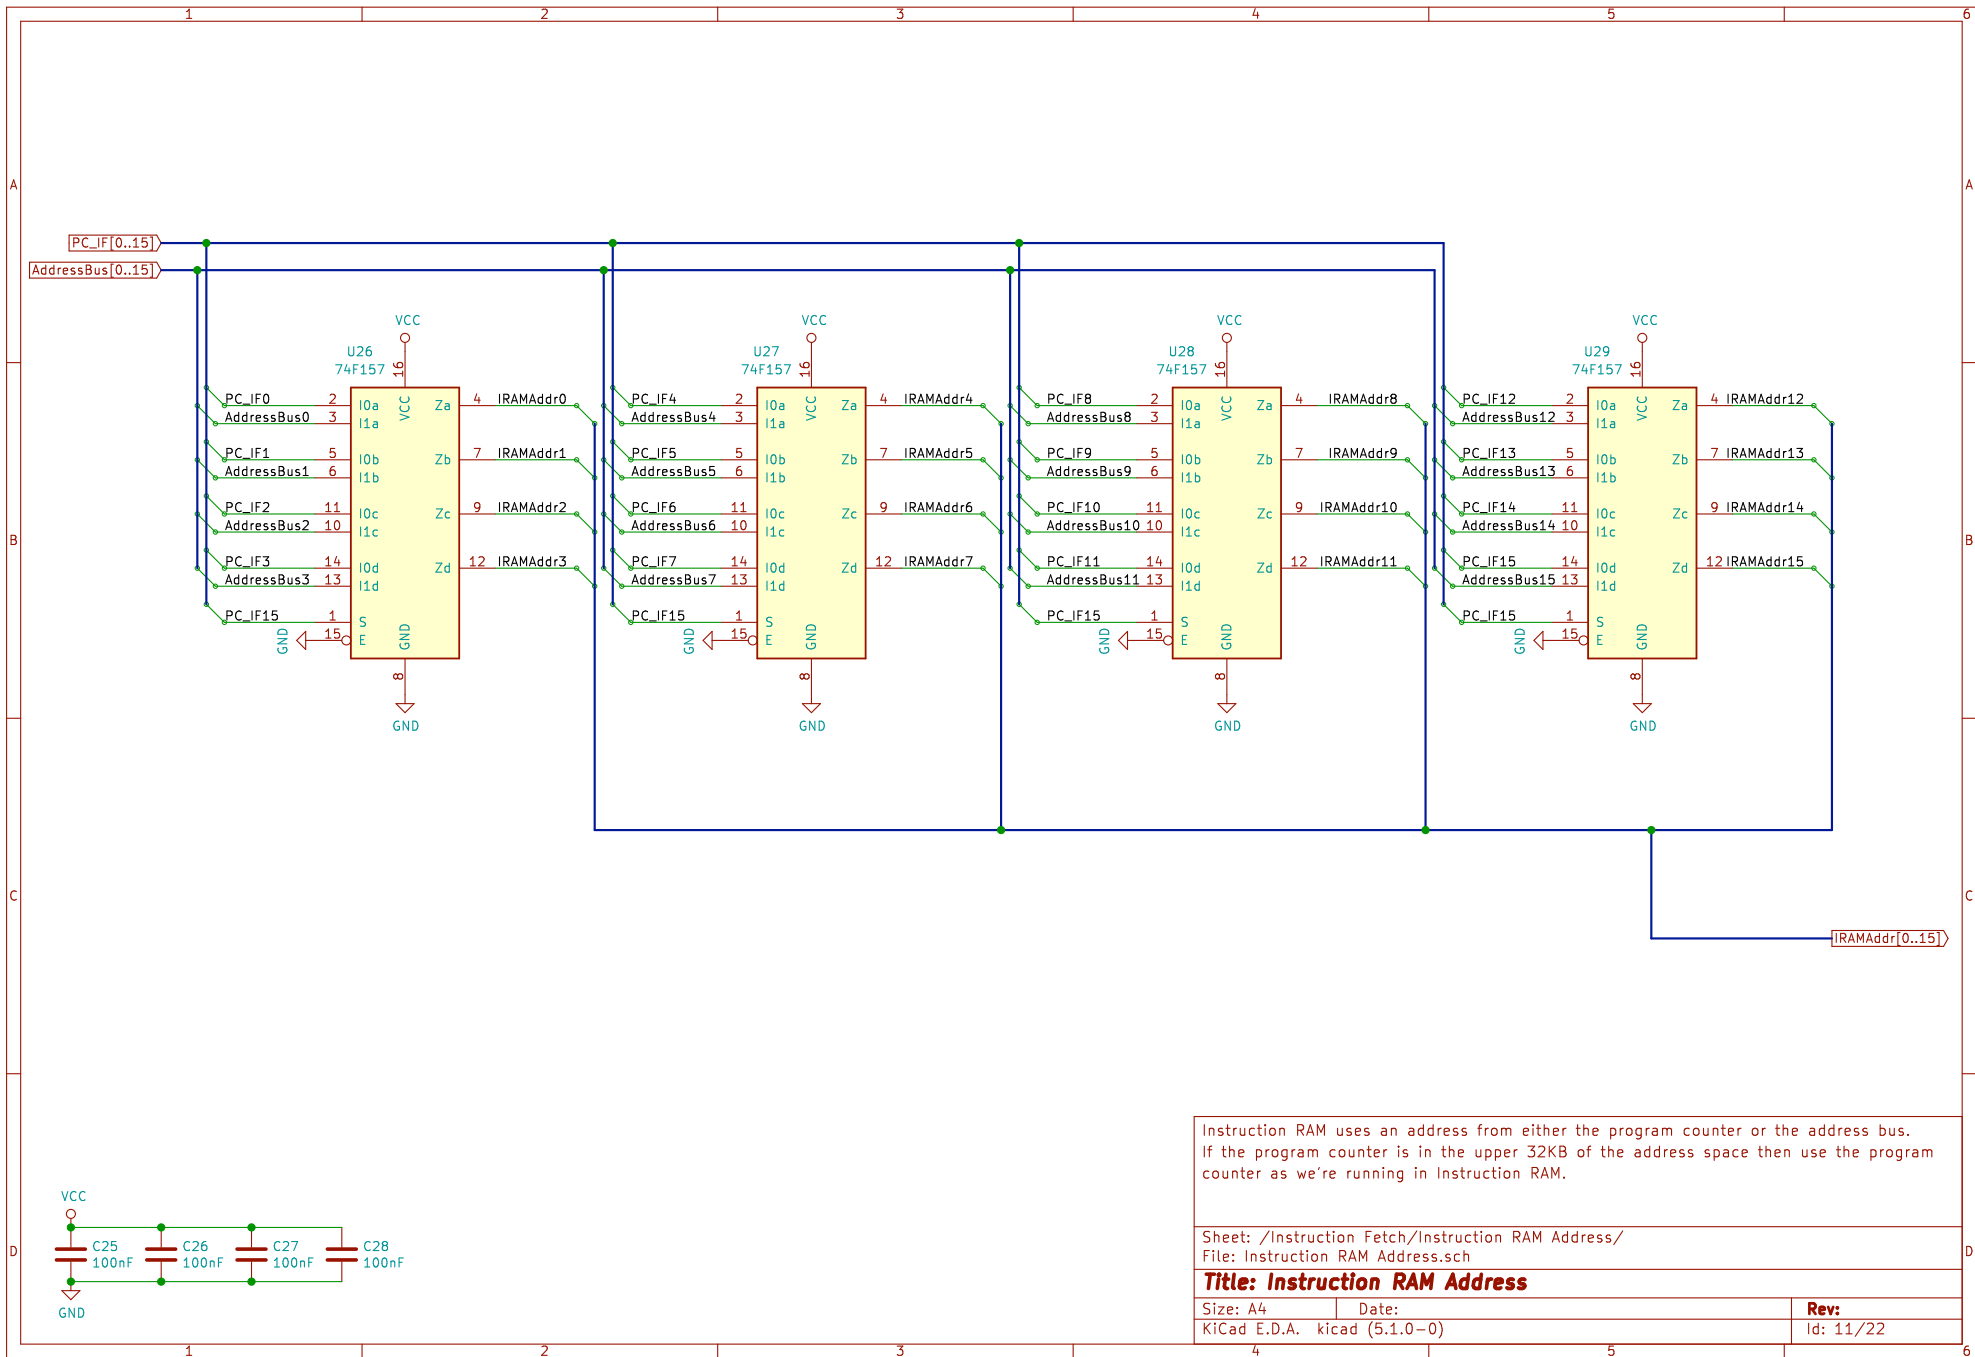

The PC/IF register sits between the program counter and the Instruction Fetch stage. This alleviates timing constraints related to the phase shift between the register clock and the control clock.

The MCP100 provides Power-on Reset functionality.
A button is also provided to manually reset the machine.
During reset, the control clock is pulsed repeatedly to flush the pipeline.
